

PROJECT SPECIFICATION

Item Catalog

API Endpoints

CRITERIA	MEETS SPECIFICATIONS
Does the project implement a <code>JSON endpoint</code> with all required content?	The project implements a <code>JSON endpoint</code> that serves the same information as displayed in the <code>HTML endpoints</code> for an arbitrary item in the catalog.

CRUD: Read

CRITERIA	MEETS SPECIFICATIONS
Does the website read category and item information from a database?	Website reads category and item information from a database.

CRUD: Create

CRITERIA	MEETS SPECIFICATIONS
Does the website include a form allowing users to add new items and correctly processes these forms?	Website includes a form allowing users to add new items and correctly processes submitted forms.

CRUD: Update

CRITERIA	MEETS SPECIFICATIONS
Does the website include a form to update a record in the database and correctly processes this form?	Website does include a form to edit/update a current record in the database table and correctly processes submitted forms.

CRUD: Delete

CRITERIA	MEETS SPECIFICATIONS

CRITERIA	MEETS SPECIFICATIONS
Does the website include a way to delete an item from the catalog?	Website does include a function to delete a current record.

Authentication & Authorization

CRITERIA	MEETS SPECIFICATIONS
Do create, delete, and update operations consider authorization status prior to execution?	Create, delete and update operations do consider authorization status prior to execution.
Does the website implement a third party authentication and authorization service?	Page implements a third-party authentication & authorization service (like <code>Google Accounts</code> or <code>Mozilla Persona</code>) instead of implementing its own authentication & authorization spec.

CRITERIA	MEETS SPECIFICATIONS
Is there a "login" and "logout" button/link in the website?	Make sure there is a 'Login' and 'Logout' button/link in the project. The aesthetics of this button/link is up to the discretion of the student.

Code Quality

CRITERIA	MEETS SPECIFICATIONS
Is the code ready for personal review and is neatly formatted?	Code is ready for personal review and neatly formatted and compliant with the Python PEP 8 style guide.

Comments

CRITERIA	MEETS SPECIFICATIONS
Are comments present and effectively explain longer code procedures?	Comments are present and effectively explain longer code procedures.

Documentation

CRITERIA	MEETS SPECIFICATIONS
Is there a <code>README</code> file included detailing all steps required to successfully run the application?	<code>README</code> file includes details of all the steps required to successfully run the application.

Suggestions to Make Your Project Stand Out!

- Add `CRUD` functionality for image handling.
- Implement `CSRF` protection on your `CRUD` operations.
